**LIFT SYSTEMS**

[www.gregorypoolelift.com](http://www.gregorypoolelift.com)

### **GAS TRUCKS**

### **PROCEDURES**

Operation	Machine is brought up to working temperatures and then inspected.
Hydraulics	Check hydraulics under load to verify proper operation and no leaks or drifting.
Mast	Inspect mast, including rollers and chains, to verify good condition.
Forks	Inspect to verify forks are in good condition and within proper spec.
Engine	Verify no smoking, engine noise or leaks are present and then service.
Transmission	Confirm transmission is pulling properly.
Brakes	Confirm parking and service brakes function properly.
Steer Axle	Confirm that steer axle is functioning properly.
Radiator	Inspect for clogging and leaks.
Cooling System	Inspect for clogging and leaks.
Tires	Inspect - should be 50% or better with no damaged areas.
Cosmetics	Machine is returned to fair cosmetic condition.
Seat	No holes or tears - slides must operate.
Paint	Machine is thoroughly cleaned and wiped off.
Accessories	Verify accessories are operating properly.
Safety Equipment	All safety equipment must be in good working order.
Final Check	Technician/Used Equipment Manager to make final check prior to shipment.

### **ELECTRIC TRUCKS**

Same guidelines as gas trucks, plus:

Electrical	Examine motor and contactors for wear and condition.
Battery	Remove from truck and inspect.
Charger	Verify charger operates properly.

**Final check: Service & Branch Manager**
